Module 1: Threat Modeling & Zero Trust

Never trust, always verify: the pillars of modern enterprise zero-trust.

STRIDE threat modeling methodology applied to cloud services.

Cybersecurity Engineering & Threat Defense

Module 2: Applied Cryptography

Symmetric (AES-256-GCM) vs Asymmetric (RSA, ECC Curve25519) encryption.

Digital signatures, PKI certificate authorities, and TLS 1.3 handshakes.

Module 3: Web Application Security

Preventing SQL Injection, Cross-Site Scripting (XSS), and CSRF vulnerabilities.

Content Security Policy (CSP), HTTP security headers, and secure cookie flags.

Module 4: Network Defense & SIEM

Intrusion Detection Systems (Snort/Suricata) and packet inspection.

Log aggregation, threat hunting, and automated incident response playbooks.

Module 5: Security Architecture & Auditing

Conducting thorough penetration testing with ethical boundaries.

Compliance frameworks: ISO 27001, SOC 2, and NIST Cybersecurity Framework.
